35 Elected To Academy Of Sciences

The National Academy of Sciences here yesterday elected 35 new members on the basis of distinguished and continuing achievements in original research.

Election to membership in the Academy is considered to be one of the highest honors accorded an American scientist or engineer.

The Academy also re-elected its treasurer, Lloyd V. Berkner, president of the Graduate Research Center of the Southwest, and chose two new council members. Elected to the council were K. S. Pitzer, of Rice University, and Paul Weiss, of The Rockefeller Institute.

Newly elected members of the Academy are:

Thomas P. Anderson, senior member, Institute for Cancer Research and professor of biophysics, University of Pennsylvania; James R. Arnold, professor of chemistry, University of California, San Diego; Lipman Bers, professor of mathematics, Harvard University.

Raoul Bott, professor of mathematics, Harvard University; Robert J. Bradwood, University of Chicago; Jule G. Charney, professor of meteorology, Massachusetts Institute of Technology; David Y. Curtin, professor of organic chemistry, University of Illinois.

Philip J. Darlington Jr., professor of zoology, Harvard University; Freeman J. Dyson, professor of physics, Institute for Advanced Study; Harold S. Edgerton, professor of electrical engineering, M.I.T.; Louis B. Flexner, professor of anatomy, University of Pennsylvania; Alfred Gilman, professor of pharmacology, Albert Einstein College of Medicine, Yeshiva University; Walter Gordy, professor of physics, Duke University; Philip Handler, professor of biochemistry, Duke University School of Medicine.

George H. Herbig, astronomer and assistant director, Lick Observatory, University of California; Fritz John, professor of mathematics, New York University; Walter J. Kauzmann, professor of chemistry, Princeton University.

Eugene P. Kennedy, professor of biological chemistry, Harvard; Otto Krayer, professor of pharmacology, Harvard; Stephen W. Kuffler, professor of neurophysiology, Harvard; Tsung-Dao Lee, professor of physics, Columbia University; Hans Lewy, professor of mathematics, University of California, Berkeley.

Oliver H. Lowry, professor of pharmacology, Washington University School of Medicine; Clark B. Millikan, professor of aeronautics, California Institute of Technology; George P. Murdock, professor of social anthropology, University of Pittsburgh.

William D. Neff, professor of psychology, Indiana University; Keith R. Porter, professor of biology, Harvard; Joan R. Raper, professor of Botany, Harvard; Oscar K. Rice, professor of chemistry, University of North Carolina.

Kenneth D. Roeder, professor of physiology, Tufts University; Ernest R. Sears, senior geneticist, U.S. Department of Agriculture, and research associate, University of Missouri; Richard B. Turner, professor of chemistry, Rice University; Cheves T. Walling, professor of chemistry, Columbia University; Aaron C. Waters, professor of geology, University of California, and Thomas H. Weller, professor of tropical public health, Harvard School of Public Health.
